

## **VELscope System Now Distributed in 25 Countries**

*Breakthrough Oral Cancer Screening Technology Available in Only 3 Countries One Year Ago*

WHITE ROCK, British Columbia—July 28, 2008—LED Dental Inc. announced today that its VELscope Oral Cancer Screening System is now being distributed in 25 countries.

According to David Cox, president and chief operating officer of LED Dental, "Close to a half million people are diagnosed with oral cancer every year." In fact, the United States and Canada together account for less than 10 percent of worldwide oral cancer cases. "Regardless of what part of the world you are talking about," said Cox, "the problem is the late stage at which oral cancer is typically discovered. By introducing the VELscope system to other countries, we have the potential to aid tens of thousands of patients not only by helping discover oral cancer at earlier stages, but by discovering abnormal tissue while it is still in a precancerous state."

When discovered at late stages, the five-year survival rate for oral cancer is approximately 22%. Fortunately, when discovered at early stages, the survival rate can be as high as 80% to 90%, and the treatment is much less invasive and costly.

In addition to the United States, its largest market, and Canada, the VELscope system has official distribution agreements in twenty-three other countries. These countries, and their respective VELscope system distributors, are as follows:

- Australia- Inline Systems
- Austria- Rocker/Narjes
- Belgium- Opsyse
- Czech Republic- BBServis
- France- Opsyse
- Germany- Rocker/Narjes
- Hong Kong- HealthCare Dental
- India- Confident
- Ireland- Optident
- Italy- Mectron
- Korea- Osstem
- Malaysia- NTC
- Mexico- Velopex
- New Zealand- Inline Systems
- Poland- BBServis
- Portugal- Detecta+
- Singapore- IDS
- Slovakia- BBServis
- Spain- Detecta+
- Switzerland- Kaladent
- Thailand- Accord
- Turkey- Ekodent
- UK- Optident

Claudia Morell, International Business Development Manager for LED Dental, said, "We are very pleased by the reception the VELscope system has been given in these countries. Each of our distributors is very committed to the cause of earlier detection of oral cancer and making significant progress in introducing our potentially life-saving technology to the dental professionals in their country." Ms. Morell added, "We are also quite proud of the momentum we are generating, as our

authorized distribution has grown from 3 countries to 25 countries in the past year. Moreover, we are currently pursuing signed distribution agreements in 10 additional countries.”
